PLUSMA
Deodorize! Sterilize! Purify!

Refreshing Every Minutes

Acson PLUSMA utilized cold plasma technology where massive positive and purify the air to give a fresher, healthier and more refreshing environment for better health and sustainability lifestyle.

Fast Cooling

In a hot day where cool air is needed quickly, TURBO mode cools the room 33% faster by forcing the unit to run at full force for 20 minutes before the original setting is restored.

Wide & Long Air Flow

The new SCR (Silicon Control Rectifier) motor gives a stepless change in speed resulting in smoother air throw and minimum sound level change during fan speed changes. Combine with the highly efficient cross flow fan, it can evenly distribute air up to 6 meter away.

Silent Atmosphere

Quiet mode lowers the noise level by changing the frequency and fan speed of the unit. When serenity and tranquility state is desired, it will bring down the sound level to an unobstructive 25bBA. This function is perfectly convenient during the night.
